Yellow numbers on a screenshot match the numbered notes beside it.

receive

Words in this style are buttons or labels exactly as they appear in the app.

VW-EX4M7P

Codes look like this.

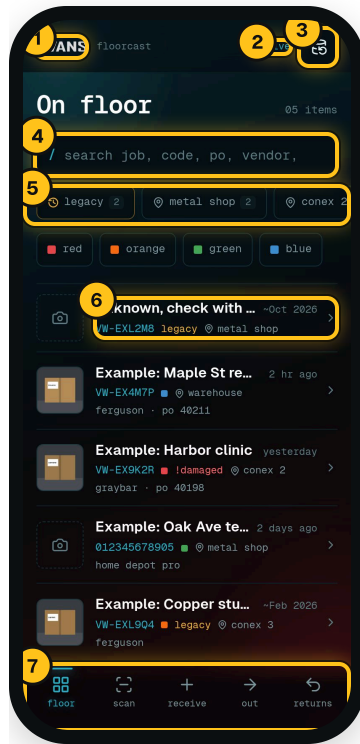

ADMINISTRATOR marks steps only Administrator phones can do.

FIELD PHONES marks what's different on Field phones.

01 Welcome to Floorcast

Floorcast is the shop's live list of every box on the warehouse floor: what it is, which job it's for, where it sits, and who took it. Every phone sees the same list, and changes show up on every phone within a second or two.

The main screen

- 1 Tap the logo for the floor**
From any screen, tap the VANS logo to come back to the floor list.
- 2 Live: changes from other phones show up by themselves**
live means changes from other phones appear by themselves.
connecting or a red **offline** means check the Wi-Fi or signal.
- 3 Backup & setup (admin)**
Only on Administrator phones. Field phones show a **field** badge here instead.
- 4 Search anything**
Type any part of a job name, code, PO, vendor, PM, or place.
- 5 Filter by place**
Each chip shows how many boxes are at that place. Tap to show only those.
- 6 Tap a box to open it**
Photo, job, code, color tag, place, vendor and PO. Tap the photo to see it full size.
- 7 Main tabs**
The five tabs, always at the bottom.

The five tabs

TAB	WHAT IT'S FOR
floor	Every box that's in the warehouse now. Search, filter, open.
scan	Point the camera at a sticker (or type a code) to open that box or return.
receive	Log a new delivery and make its sticker.
out	Boxes that have been checked out: who took them, when, and where from.
returns	Items coming back: to a vendor, to stock, under warranty, or not sure yet.

TIP Codes are the heart of Floorcast. Boxes get a **VW-** code on a QR sticker (or keep the code already printed on the box). Returns get a four-digit code like **VRS-7854** written on the item.

02 Getting started on a phone

Floorcast is a website, so there's nothing to install from an app store. Open it once, add it to the home screen, and choose who is using the phone.

1 · Open Floorcast

1. Scan the **Floorcast poster** posted in the warehouse with the phone's camera, or type floorcast.pages.dev into the browser.
2. Allow the camera when the phone asks. Floorcast needs it for scanning stickers and taking box photos.

2 · Add it to the home screen

IPHONE (SAFARI)

Tap the **Share** button (square with an arrow), scroll down, tap **Add to Home Screen**, then **Add**.

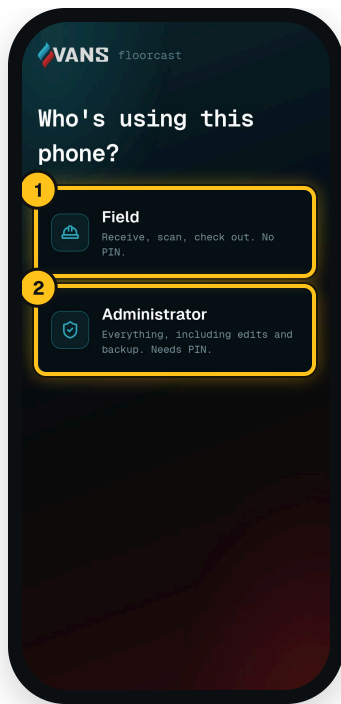

ANDROID (CHROME)

Tap the **⋮** menu, then **Add to Home screen** or **Install app**, then **Add**.

Floorcast then opens full screen from its own icon, like any other app.

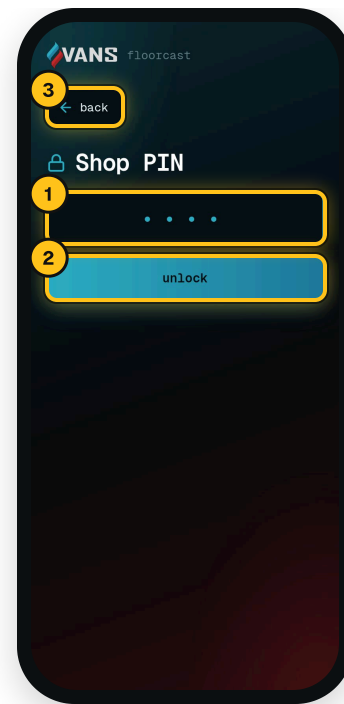

3 · Choose who's using this phone

The first time Floorcast opens on a phone, it asks once. The phone remembers the choice.

Pick a role

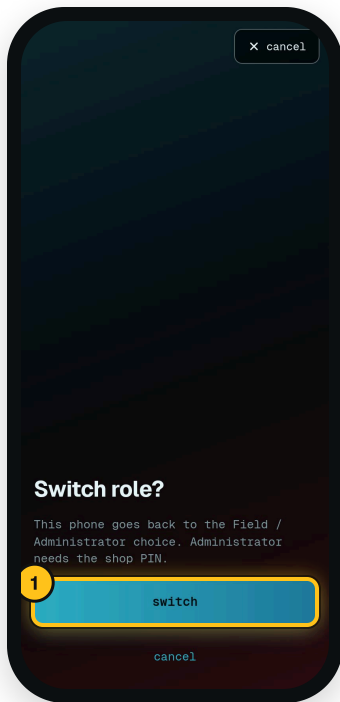

- 1 **Field — no PIN**
For the crew. No PIN. Can receive, scan, check out and move boxes, print stickers, and start returns.
- 2 **Administrator — shop PIN**

Administrator only: enter the shop PIN

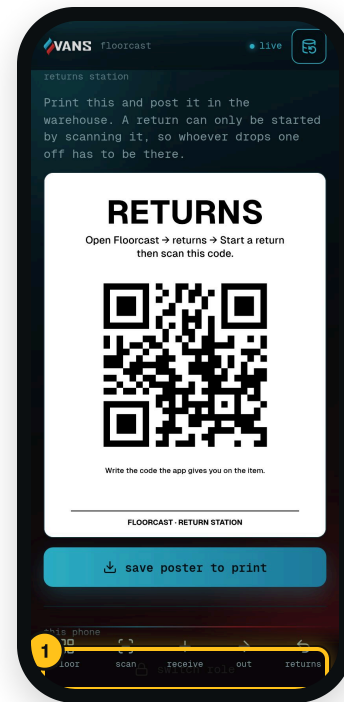

- 1 **Type the shop PIN**
The PIN is the same one the shop has always used.
- 2 **Unlock**
- 3 **Back to the role choice**
Changed your mind? Go back and pick Field.

4 - Switching roles later

On a Field phone: tap the **field** badge (top right), then
Switch

1 Back to the role choice

On an Administrator phone: Backup & setup → **Switch**
role

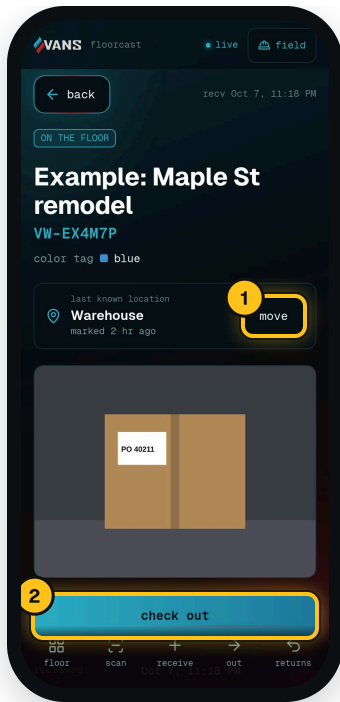

1 Switch role on this phone

TIP Switching sends the phone back to the Field / Administrator choice. Nothing on the list is changed. If the shop PIN is ever changed, Administrator phones are sent back to the choice automatically.

03 Who can do what

Field phones can do the everyday work but can't change or delete anything that's already saved. Administrator phones can do everything.

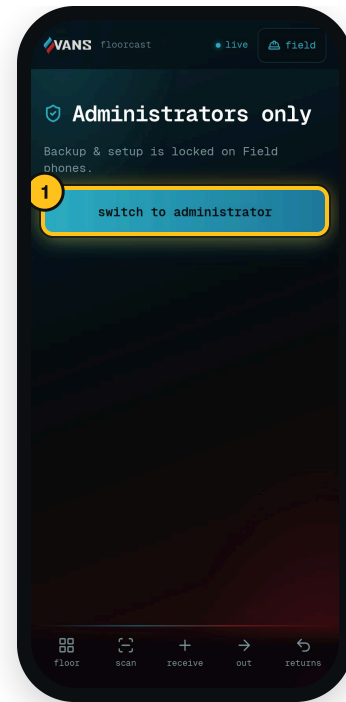

ACTION	FIELD	ADMINISTRATOR
See the floor, Out and Returns lists, search and filter	✓	✓
Open any box or return and see all its details and photos	✓	✓
Receive a new delivery (with photo and sticker)	✓	✓
Scan stickers with the camera or a handheld scanner	✓	✓
Check a box out	✓	✓
Move a box (update its last known location)	✓	✓
Save or print a sticker	✓	✓
Add a photo to a box that has none	✓	✓
Mark a box as legacy while receiving it	✓	✓
Start a return at the returns station	✓	✓
Return a checked-out box to the floor	—	✓
Edit a box's details or retake its photo, or change whether it's legacy	—	✓
Remove a box	—	✓
Close out, reopen, change type, edit or remove a return	—	✓
Backup & setup: export, restore, system check, posters	—	✓

A box on a Field phone: Move, Check out and the sticker.
No Edit or Remove.

1 Move

2 Check out

Backup & setup on a Field phone

1 Needs the shop PIN

CAREFUL Roles keep the floor crew from changing or deleting things by accident. They're a lock on the app's screens, not a password on the database, so keep the shop PIN among administrators.

04 Receiving a delivery

Every box that comes in gets an entry, a photo, and a sticker. It takes about a minute. Only the job name and location are required; fill in what you know.

At a glance

1. Tap **receive**. Keep **New VW- code** unless the box already has a code you want to use.
2. Type the job name. Add the PO and vendor from the packing slip.
3. Fill in who delivered it and who signed, the PM, and quantities if you have them.
4. Answer packing slip and damage, and pick a color tag if there is one.
5. Check the last known location, add notes, and take a photo of the box.
6. Tap **Receive to floor**, print the sticker, and put it on the box where it's easy to scan.

Step 1 - Code and job

The screenshot shows the 'New delivery' form in the VANS floorcast app. The form has a dark background with white text. At the top, there's a 'code' section with two options: 'New VW- code' (highlighted with a yellow circle and number 1) and 'Code on the box'. Below this is a 'Legacy box' section with a toggle switch. The 'Job name' field is highlighted with a yellow circle and number 2. The 'PO #' field is highlighted with a yellow circle and number 3. The 'Vendor' section has a 'Choose vendor' dropdown menu highlighted with a yellow circle and number 4. Below these are fields for 'delivered by' (with a 'Carrier or driv' button), 'received by' (with a 'Who signed' button), and 'pm' (with a 'Project manager' text input). At the bottom, there's a navigation bar with icons for 'floor', 'scan', 'receive' (highlighted with a blue bar), 'out', and 'returns'.

- 1 **New VW- code, or use the code already on the box**
New VW- code: Floorcast makes a code and a QR sticker for you. Use this for almost everything.
Code on the box: keep a barcode or QR that's already on the box. Scan it with the camera button or a handheld scanner, or type it.
- 2 **Job name (required)**
The job the material is for. This is the big name everyone sees in the list.
- 3 **PO number**
From the packing slip, if there is one.
- 4 **Vendor list**
Opens a list: Etna, Behler-Young, Williams, Ferguson, or **Other...**

Step 2 - Vendor and who handled it

The screenshot shows the VANS floorcast app interface. At the top, there's a header with 'VANS floorcast', a 'live' indicator, and a menu icon. Below this, there are four numbered callouts: 1. 'Other...' dropdown menu, 2. 'GraybarDana' text input field, 3. 'FedEx Freight' dropdown menu for 'delivered by', and 4. 'Who signed' dropdown menu. Below these are fields for 'pm' (Rick) and 'quantities / attributes' (1 pallet, 6 boxes of breakers). There are also sections for 'packing slip' and 'damage' with 'yes', 'no', and '-' options. A 'color tag' section shows a row of colored squares with 'green' selected. The 'last known location' section has buttons for 'warehouse', 'metal shop', 'conex 1', 'conex 2', 'conex 3', and 'conex 4'. At the bottom, there are icons for 'floor', 'scan', 'receive', 'out', and 'returns'.

- 1 **Pick Etna, Behler-Young, Williams, Ferguson — or Other...**
Pick the vendor from the list. On iPhone this opens the picker wheel.
- 2 **Other: type the vendor**
For any vendor not on the list, choose **Other...** and type the name here.
- 3 **Who dropped it off**
Carrier or driver: UPS, FedEx Freight, vendor truck...
- 4 **Who signed**
Who signed for it.

Below these: **PM** (project manager) and **Quantities / attributes** (cartons, pieces, sizes, anything useful).

Step 3 - Checks, color and place

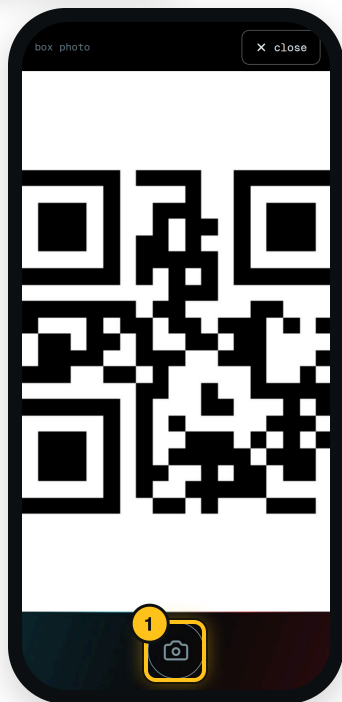

The screenshot shows the VANS floorcast app interface. At the top, there's a header with 'VANS floorcast', a 'live' indicator, and a menu icon. Below this, there are four numbered callouts: 1. 'yes', 'no', or '-' buttons for 'packing slip', 2. 'yes', 'no', or '-' buttons for 'any damage', 3. 'green' color tag selection, and 4. 'warehouse' button for 'last known location'. Below these are sections for 'notes' (Breakers for unit 4), 'box photo' with an 'open camera' button, and a 'receive to floor' button. At the bottom, there are icons for 'floor', 'scan', 'receive', 'out', and 'returns'.

- 1 **Packing slip?**
yes, **no**, or **-** if you don't know.
- 2 **Any damage?**
Mark damage here, then say what's damaged in the notes and take a photo. Damaged boxes show a red **!damaged** on the list.
- 3 **Color tag**
Match the colored tape or tag on the box, if the shop uses one for this job.
- 4 **Last known location (required)**
Where the box is going. Tap a place, or **other** and type it (for example, Trailer 7).

Step 4 - Notes, photo, save

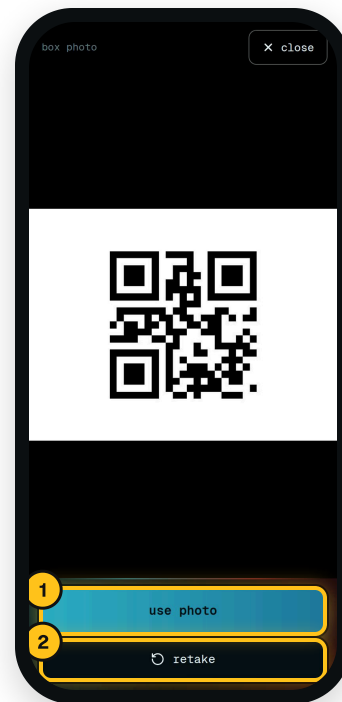

The screenshot shows the 'VANS floorcast' app interface. At the top, there's a 'live' status and a list icon. Below are sections for 'packing slip' and 'damage', each with 'yes', 'no', and '-' buttons. A 'color tag' section shows a row of colored squares with 'green' selected. A 'known location' section has a grid of buttons: 'warehouse', 'metal shop', 'conex 1', 'conex 2', 'conex 3', 'conex 4', and 'other'. Below this is a 'yes' section with a text input field containing 'Breakers for unit 4'. A 'box photo' section has an 'open camera' button. At the bottom is a large blue 'receive to floor' button. A bottom navigation bar includes icons for 'floor', 'scan', 'receive', 'out', and 'returns'. Numbered callouts point to: 1. 'known location' section, 2. 'Breakers for unit 4' text field, 3. 'open camera' button, and 4. 'receive to floor' button.

- 1 Where it's being put**
Required. Warehouse is picked for you; change it if the box goes elsewhere.
- 2 Notes**
Anything the next person should know.
- 3 Box photo**
Optional but strongly recommended. A photo makes the box easy to find.
- 4 Save it**
Saves the entry for every phone and makes the sticker.

Frame the whole box, label side up, and tap the shutter

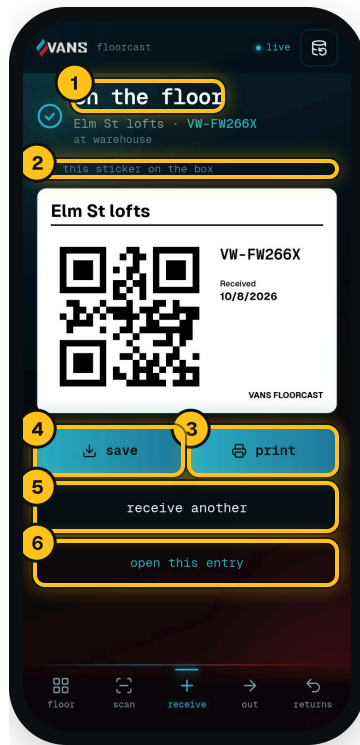

- 1 Take photo**

Check it, then **Use photo** (or **Retake**)

- 1 Use it**
- 2 Try again**

Step 5 - Sticker the box

- 1 Saved: its code and place**
The box is on the floor list now, at the place you picked.
- 2 The sticker**
The sticker shows the job, the QR code, the code in big letters, and the date received.
- 3 Print the sticker**
Sends the sticker to the label printer or any printer.
- 4 Save it as an image**
Saves the sticker as an image, to print later or text to someone.
- 5 Next delivery**
Clears the form for the next box.
- 6 Open the box's page**
Opens the box's page.

TIP If you leave the Receive tab in the middle of an entry, what you typed is kept until you come back or save.

CAREFUL Receiving a code that's already in the warehouse is blocked, so nothing gets entered twice. Scan it instead to open the existing box.

05 Legacy boxes (here before Floorcast)

Boxes that were on the floor before Floorcast started go in once, with the **Legacy box** switch on Receive. Only the job name and where it sits are needed; the rest is optional. Field phones can do it, so the whole crew can help with the sweep.

The screenshot shows the 'New delivery' form in the VANS floorcast app. At the top, there's a 'barcode' section with 'New VM- code' and 'Code on the box' buttons. Below that, a note says 'a new VM- code and sticker are made when you save'. The form has several fields: 'legacy box' (a toggle switch labeled 'here before Floorcast'), 'when did it arrive?' (a date picker set to 'March 2025'), 'job *' (a text field with 'Copper fittings, shelf B'), 'color tag' (a row of colored squares), and 'last known location *' (a grid of location buttons including 'warehouse', 'metal shop', 'conex 1', 'conex 2', 'conex 3', 'conex 4', and 'other'). The bottom navigation bar has icons for 'floor', 'scan', 'receive', 'out', and 'returns'.

1 **Legacy box switch**

Turn it on for anything that was already here. It stays on for the next box when you tap **Receive another**, along with the month and place.

2 **About when it arrived (optional)**

If anyone knows roughly when it came in, pick the month. Leave it blank if nobody knows; today is used.

3 **Job name**

What it's for. If nobody knows, use something searchable like "Unknown, check with PM".

4 **Where it sits now**

Where it's sitting right now.

The screenshot shows the 'more details' section of the VANS floorcast app. It includes a 'job *' field with 'Copper fittings, shelf B', a 'color tag' row, and a 'last known location *' grid. Below these is a 'more details' field (labeled 'optional') and a 'box photo' section with an 'open camera' button. At the bottom, there's a 'receive to floor' button. The bottom navigation bar is the same as the previous screenshot.

1 **Everything else, folded away**

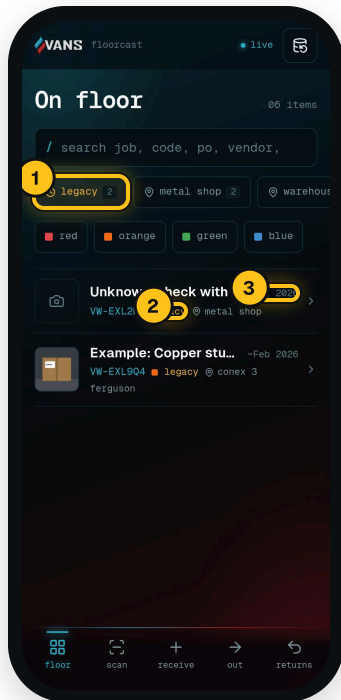

PO, vendor, quantities, notes and the rest are tucked under **more details**. Fill in what you know; skip the rest.

2 **Save it**

Then take a photo, print the sticker and stick it on, as for any delivery.

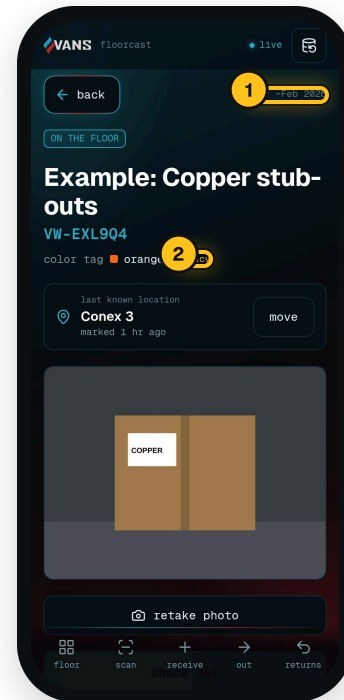

Running the sweep

1. Split the warehouse by place (Warehouse, Metal shop, Conex 1–4) and give each area a person or pair.
2. Turn on **Legacy box**, pick the place, and enter each box: job, photo, sticker. Add colored tape if it has a color tag.
3. Mark finished boxes (a dot of tape) so nobody enters one twice.
4. When an area is done, use the floor list's place filter to check the count against what's on the shelves.

On the floor list: the **legacy** filter shows only old stock

- 1 **Legacy filter, with its count**
- 2 **Legacy tag on the row**
- 3 **Approximate arrival month**

On a box's page: the tag and the approximate month

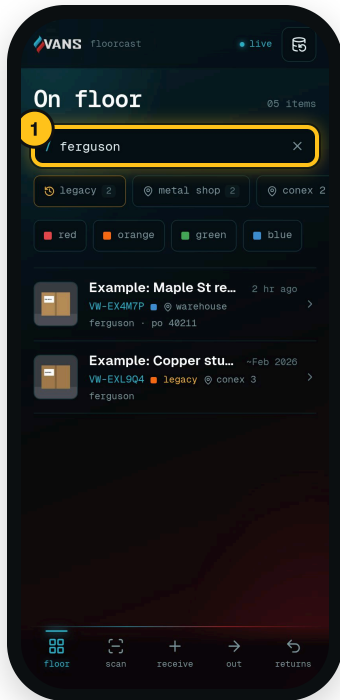

- 1 **Approximate arrival month**
- 2 **Legacy tag**

TIP The **legacy** chip makes PM claim days easy: filter to legacy, then search a job or a place. Missing details on a legacy box are expected; an Administrator can fill them in later with Edit details.

ADMINISTRATOR Only an Administrator can turn legacy on or off for a box that's already in Floorcast, from **Edit details**.

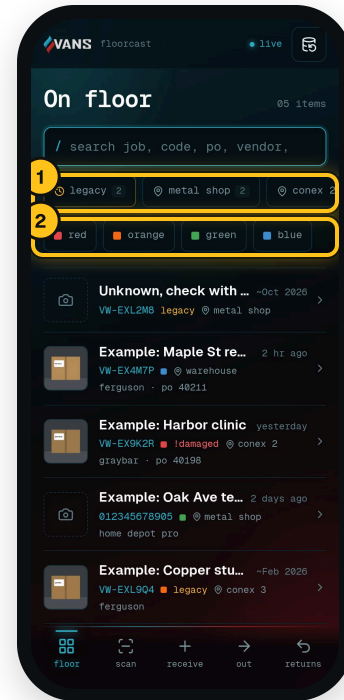

06 Finding boxes on the floor

The floor list shows every box in the warehouse, newest first. Search and the filters narrow it down. Changes from other phones appear without refreshing.

Type to search. Tap X to clear.

- Matches job, code, PO, vendor, place...**
Searching “ferguson” finds every box from Ferguson. Search also matches job, code, PO, PM, notes, and place.

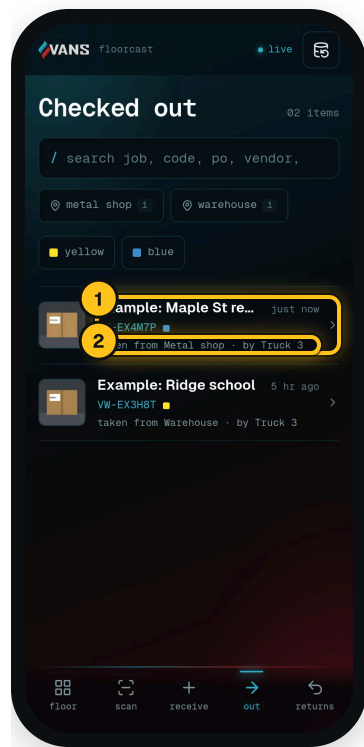

Filter by place and by color tag

- Location chips with counts**
The number is how many boxes are there. Tap again to turn the filter off.
- Color tag chips**
Shows only boxes with that color tag.

Reading a row

- **Job name** in white, with how long ago it was received on the right.
- The **code** in blue, the color tag square, a red **!damaged** if marked, and a pin with its **place**.
- The **vendor** and **PO** underneath.
- Tap the **photo** to see it full size. Tap anywhere else on the row to open the box.

The Out list

1

Checked-out boxes

Boxes that have been checked out, newest first. Same search and filters as the floor.

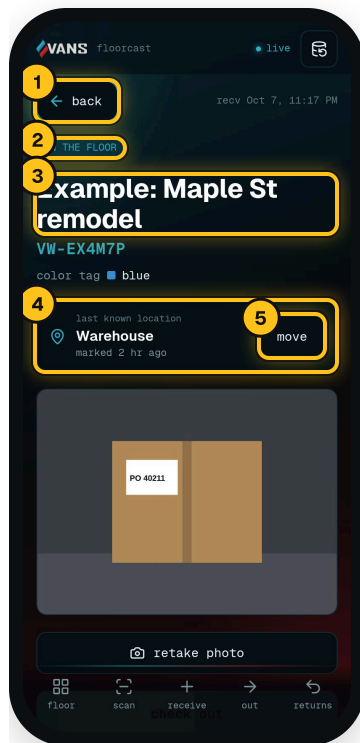

2

Taken from / by

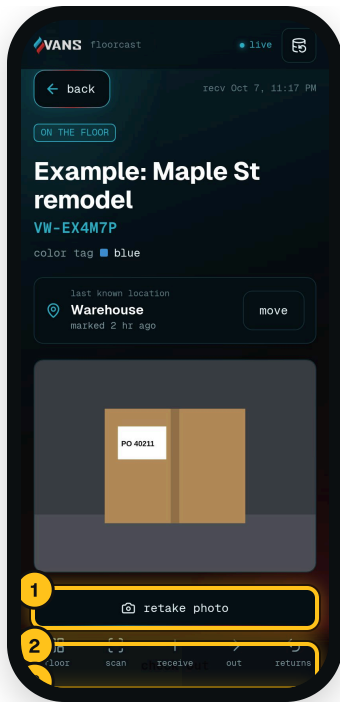

Taken from is the box's last known location; **by** is who took it.

07 A box's page

Open a box from the list, a scan, or a typed code. Its page has everything about it, plus the actions for it.

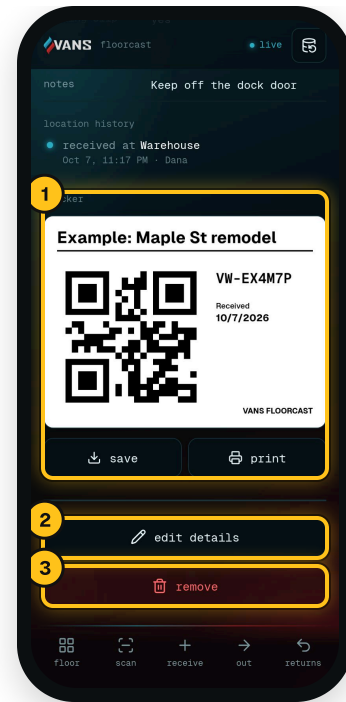

- 1 Back**
Goes back to wherever you came from.
- 2 Status**
On the floor, or **Checked out** with who and when.
- 3 Job and code**
Job name, then its code.
- 4 Last known location**
Where the box was last marked, and how long ago.
- 5 Mark where it is now**
Use this whenever the box is moved. See “Moving a box” below.

Photo, Check out, and every detail

- 1 **Retake photo (admin)**
Administrators only. A Field phone sees **Add photo** only when the box has no photo.
- 2 **Check out**
- 3 **All the details**

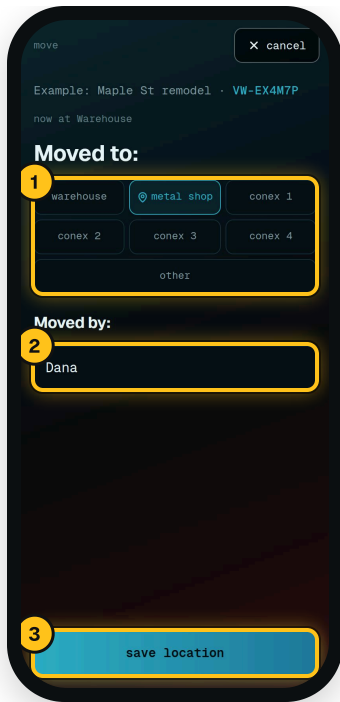

Sticker, and Administrator tools

- 1 **Reprint or save the sticker**
Print or save the sticker again if it's lost or damaged.
- 2 **Edit (admin)**
Fix any detail. Only while the box is on the floor.
- 3 **Remove for good (admin)**
Deletes the box, its sticker and photos for every phone. Cannot be undone.

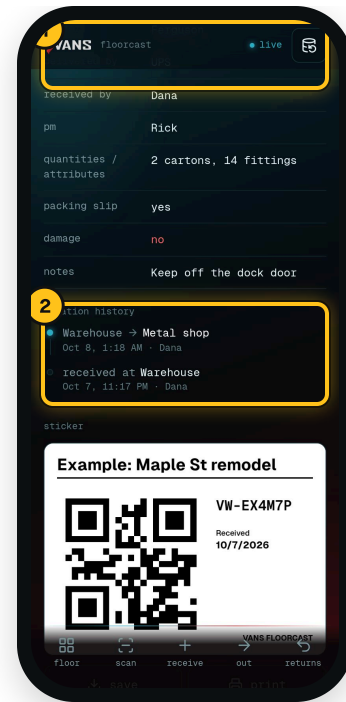

Moving a box

Every time a box changes places, mark it, so the next person looks in the right spot. Old places are kept as history.

Tap **Move**, pick the place, sign, save

- 1 Pick the new place, or Other
- 2 Who moved it
- 3 Save the move

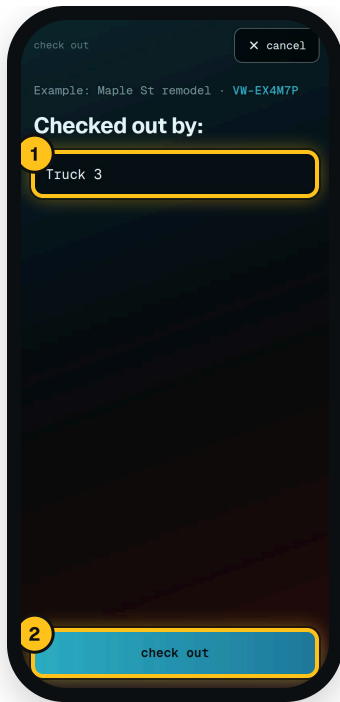

The new place, and the history underneath

- 1 Now at Metal shop
- 2 Every move, newest first

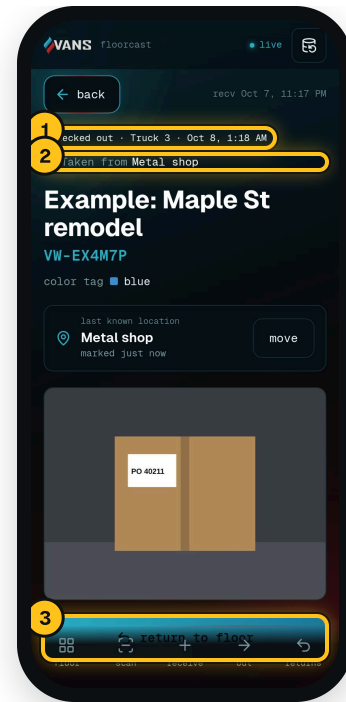

Checking a box out

1. Open the box (scan its sticker is fastest) and tap **Check out**.
2. Type who's taking it: a name, a truck, a crew.
3. Tap **Check out** again. The box moves from the floor list to the **Out** list.

Who's taking it

- 1 Who's taking it
- 2 Confirm

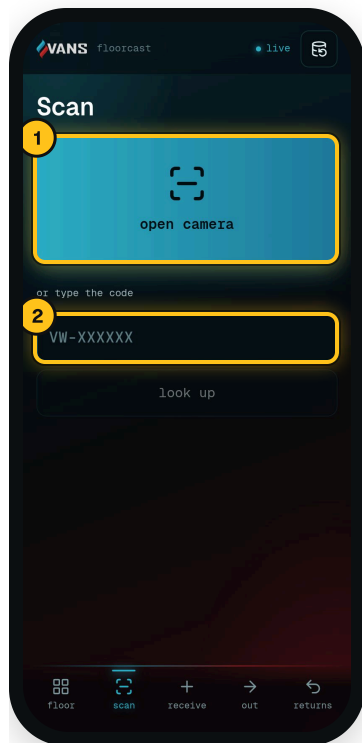

Checked out: who, when, and where from

- 1 Who took it and when
- 2 Where it was taken from
- 3 Return to floor (admin)
Administrators only. Puts the box back on the floor list.

TIP Checked-out boxes always show **Taken from** and their last known location, so you know where they left from.

08 Scanning

Scanning is the fastest way to open a box or a return. Floorcast reads its own QR stickers, return codes, and most barcodes already on boxes.

1 Open the camera scanner

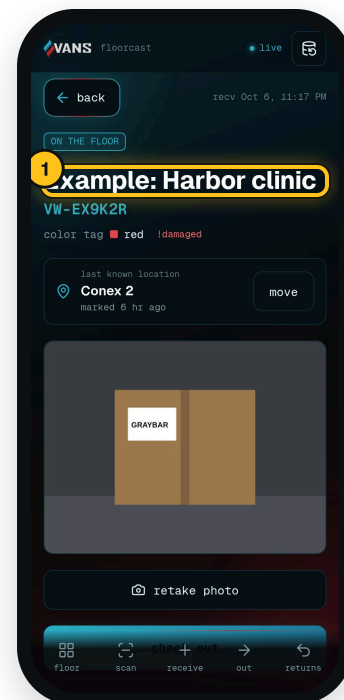

Opens the camera full screen. Hold the sticker inside the frame; it reads by itself.

2 Or type a code

If a sticker won't scan, type the code and tap **Look up**. Dashes and capitals don't matter.

The camera scanner. Tap **close** to stop, or **type code**.

It opens the box it read

1 The box it read

What happens after a scan

YOU SCAN...	FLOORCAST...
A box that's in Floorcast	Opens that box's page.
A return code (VVR- , VRS- , VWR- , VRR-)	Opens that return.
A code Floorcast has never seen	Opens Receive with that code filled in, ready to log it.

Handheld and Bluetooth scanners

A scanner gun that types like a keyboard works anywhere in the app. Scan on any screen and Floorcast opens the box or return. On the Receive screen, a scan fills in the box's code instead.

TIP Scanning dark or shiny stickers: tilt the sticker slightly to kill glare, and move back a little if it's too close to focus.

09 Returns

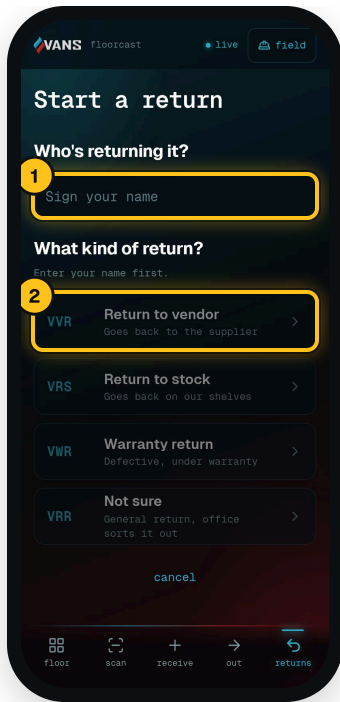

Anything coming back (wrong parts, leftovers, warranty items) gets a return code written on it. A return can only be started at the warehouse, by scanning the returns station poster, so whoever drops it off has to be there.

The four kinds of return

CODE	KIND	USE IT FOR
VVR-####	Return to vendor	Goes back to the supplier.
VRS-####	Return to stock	Goes back on our shelves.
VWR-####	Warranty return	Defective, under warranty.
VRR-####	Not sure	General return; the office sorts it out.

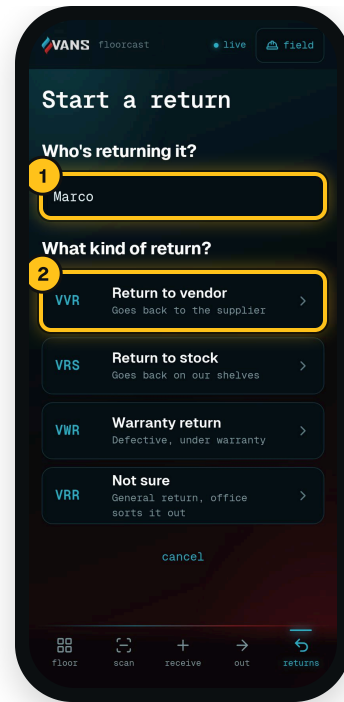

Starting a return (any phone)

1. Go to **returns** → **Start a return**. The camera opens.
2. Scan the **returns station** QR poster on the warehouse wall.
3. Type your name. Then pick the kind of return.
4. Floorcast shows the new code. **Write it on the item** with a marker, big and clear.
5. Optionally add a photo, the vendor, the job it came from, and a note. Tap **Done**.

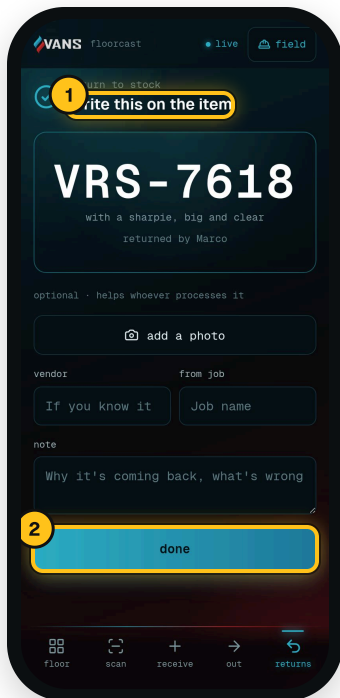

After the station scan

- 1 After the station scan: your name
- 2 Locked until a name is in

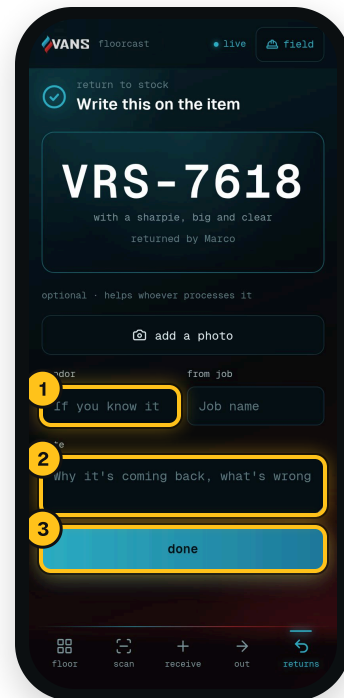

Name first, then the kind

- 1 Your name first
- 2 Then pick the kind

Write the code on the item

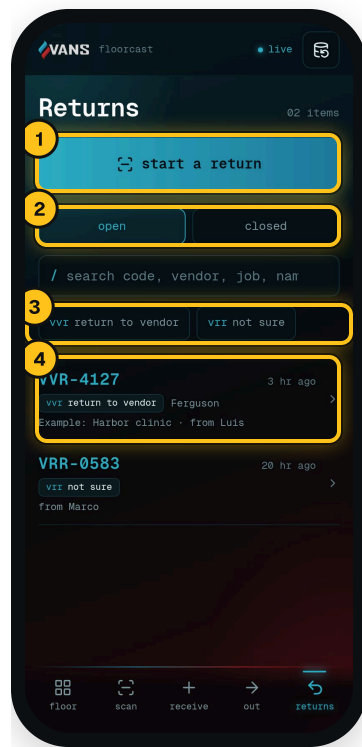

- 1 Write the code on the item
- 2 Done saves it

Add what you know, then Done

- 1 Vendor, if you know it
If you know who it goes back to.
- 2 What's wrong
Why it's coming back, or what's wrong.
- 3 Done

The returns list

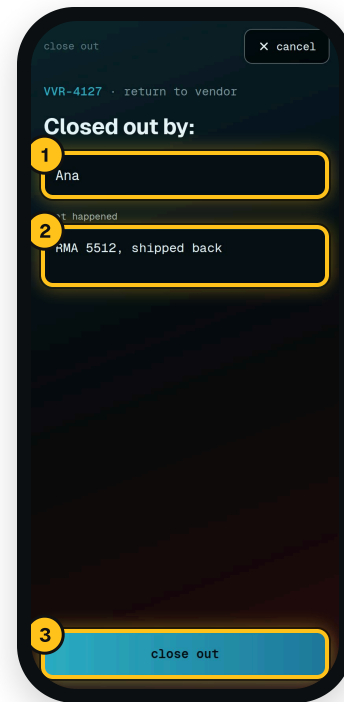

- 1 Start a return**
The station scan starts here.
- 2 Open / closed**
open: still to be handled. **closed:** done.
- 3 Filter by type**
Show only one kind.
- 4 Tap one to open it**
Code, kind, vendor, job, and who brought it.

Handling a return (Administrator)

A return's page

- 1 The code written on the item
- 2 Close out when it's handled
- 3 Change type (code stays)
Changes the kind. The code written on the item stays the same.
- 4 Photo

Closing it out

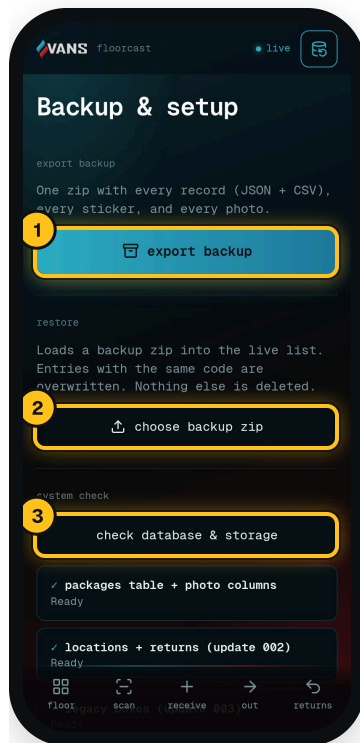

- 1 Who closed it
- 2 What happened (RMA, restocked...)
RMA number, "restocked to bin 4", "shipped back"...
- 3 Close out

ADMINISTRATOR Closed returns move to the **closed** tab with who closed them, when, and the note. An Administrator can **Reopen** one if needed.

FIELD PHONES Field phones can start returns and look them up, but can't close, change, or remove them.

10 Backup & setup (Administrator)

Tap the database icon at the top right of an Administrator phone. This is where backups, the system check, and the posters live.

- 1 Download everything as a zip**
Downloads one zip with every box, return and move history (as JSON and CSV), every sticker, and every photo. Do this regularly and keep a copy off the phone.
- 2 Restore from a zip**
Loads a backup zip. Entries with the same code are overwritten; nothing else is deleted.
- 3 Check database & storage**
Confirms the database and photo storage are set up. Green checks mean all good.

CAREFUL Restore overwrites boxes and returns that share a code with the backup. Export a fresh backup first if you're not sure.

Posters

Open-the-app poster

- 1 **Open-the-app poster**
Anyone who scans it opens Floorcast. Post it by the door or the time clock.
- 2 **Save it, then print**

Returns station poster

- 1 **Returns station poster**
Post it where returns are dropped off. Starting a return requires scanning this exact poster.
- 2 **Save it, then print**

Retiring a returns station poster

If a printed station poster gets copied or goes somewhere it shouldn't, change its secret code and print a new one. In Supabase, open **SQL Editor** and run:

```
update public.settings set value = encode(extensions.gen_random_bytes(9), 'hex')
where key = 'return_station_token';
```

Old posters stop working right away. Save and print the new poster from this page.

11 Troubleshooting & questions

Most problems are signal, camera permission, or a phone that needs its role picked again.

The top says “connecting” or a red “offline”.

The phone lost signal or Wi-Fi. Lists may be out of date and saves will fail with a message. Move toward the door or Wi-Fi and try again; nothing is lost from the list.

“That did not save.”

Usually signal. Wait a moment and tap the same button again. Your typing is still there.

The camera is black or won't open.

The browser was denied the camera. iPhone: Settings → Safari → Camera → Allow. Android: tap the lock icon by the address → Permissions → Camera → Allow. Then reload Floorcast.

A sticker won't scan.

Kill the glare, step back a little, or tap **type code** and enter the code printed under the QR.

“Not in the warehouse.”

That code isn't on the list. It may have been removed, or never received. Tap **Receive** on that screen to log it now.

“... is already in the warehouse.”

You're receiving a code that already has an entry. Scan it to open the existing box instead.

Wrong PIN.

Ask an administrator. If you only need everyday work, go **back** and choose Field.

An Administrator phone suddenly shows “Who's using this phone?”

The shop PIN was changed. Choose Administrator and enter the new PIN.

I need to edit or remove something, but the button isn't there.

The phone is set to Field. Ask an administrator, or switch role with the PIN.

A screen says “One database update” or “Database setup needed”.

A new version of Floorcast needs a one-time database change. An administrator copies the SQL shown on that screen, runs it in Supabase → SQL Editor, then taps **check again**. Existing entries are kept.

Setting up a new phone.

Scan the Open-the-app poster, add Floorcast to the home screen, and choose Field (or Administrator with the PIN). That's all.

Floorcast · Field quick card

Print me and post me by the receiving door.

Receive a delivery

1. Tap **receive**.
2. Job name. PO and vendor if there's a slip.
3. Packing slip? Damage? Color tag.
4. Last known location (Warehouse is picked).
5. **Open camera** → photo of the box.
6. **Receive to floor** → **Print** → stick it on.

Find a box

1. **scan** → **open camera** → point at the sticker.
2. Or **floor** → search a job, PO, vendor or place.
3. No sticker? Type the code under **or type the code**.

Check a box out

1. Scan the box.
2. **Check out** → who's taking it → **Check out**.
3. It moves to the **out** tab, "taken from" its spot.

Move a box

1. Scan the box.
2. **Move** → pick the new place → your name → save.

Drop off a return

1. **returns** → **Start a return**.
2. Scan the **returns station** poster.
3. Your name → pick the kind.
4. **Write the code on the item**. Add a note → **Done**.

Return codes

- VVR** back to vendor
- VRS** back to stock
- VWR** warranty
- VRR** not sure

Need to edit, remove, return a box to the floor, or close a return? Ask an administrator. · [floorcast.pages.dev](#)
